

UFBA Waterway Rule Clarifications – 27.01.2021

If the hosereel valve is open and you leave the pump area, you will be penalised if there is no one in the circle for leaving a live delivery. Especially 2-person hosereel.

Where the flake tray sits you can only stow flaked hose not equipment.

Under Blitz Monitor operating instructions, you are meant to have 8m of straight hose. This cannot be enforced under present rules.

With the equipment line, the equipment must touch the line. It can be forward or behind but it must touch the line.
